

Group 7 - Qos - FFI - 30.01.12-03.02.12

Håvard Tørresen, Jan Alexander S. Bremnes, Jørgen Nordmoen, Magnus Kirø, Ola Martin Støvneng, Stig Tore Johannesen.

Introduction

This week was quite uneventful as we mostly worked on the preliminary report. We had some more contact with the customer which cleared some more questions we had, we reported on the progress and the plan for the coming week.

Progress summary

As we completed the preliminary report with some time to spare we feel that our progress is quite good. We have a clear vision of the future and know what we are doing for the coming week and we know where we are going.

Completed tasks

We completed the preliminary report and created a rough time schedule for the weeks ahead.

New tasks

Since we focused on writing the preliminary report, no new tasks were assigned as we continued discussing the architecture and how to implement it

Planned work for next period

See attachment

Other changes (risks analysis, etc)

Since we decided to not develop a proxy setup, but rather go for a client library we will not research any more into proxy configuration and installation. This has affected our work since we have less to research and have a more clear understanding of what we are doing. The change also means that we already now know how we will design the client side architecture as this could be a bit murky if we went with a proxy.
