

## **Group 7 - Qos - FFI - 29.03.12**

Håvard Tørresen, Jan Alexander Bremnes, Jørgen Nordmoen, Magnus Kirø, Ola Martin Støvneng, Stig Tore Johannesen.

## **Introduction**

We have continued the implementation of the client, worked on the testing framework and on the report.

## **Progress summary**

During this week we have got most of the client library done, but the work on SAML-communication and -parsing has been rather slow due to lacking documentation of the external libraries we use for this. We have also started work on a testing client that can use our library when we test the whole system in NS3. We have also gotten all frameworks to work inside the LXC's and the only thing left on the testing side is getting NS3 to work with our scenarios. At the start of the week we received a list of feedback on our midterm report that we have started to work through.

## **Completed tasks**

*Please see Activity plan for week 13.*

## **New tasks**

- Started to improve the report

## **Planned work for next period**

Since next week is easter we do not have an Activity plan for that week.

## **Other changes** (risks analysis, etc)

- As we have faced some challenges on the testing we started to work on some other things which we had not planned for.
- One person was away on Thursday so we are a little short on hours for that day.
