

Group 7 - Qos - FFI - 22.03.12

Håvard Tørresen, Jan Alexander Bremnes, Jørgen Nordmoen, Magnus Kirø, Ola Martin Støvneng, Stig Tore Johannesen.

Introduction

This week has mostly been used for implementation.

Progress summary

On the client side, there have been problems with understanding/using SAML, and thus there has been minimal progress on the SAML-related classes. The rest of the client is moving along smoothly, however, despite some initial holdups due to library problems.

The server side implementation is theoretically done, pending some testing to make sure it behaves like it should.

Completed tasks

- Server is more or less finished.
- See activity plan "Week 12" for other tasks

New tasks

- NS3 testing
- Creating testing scripts

Planned work for next period

- See activity plan "Week 13"

Other changes (risks analysis, etc)

- We had an internal meeting this week about how we hadn't been very good at getting up in the morning.
 - The group agreed that we needed to get better and everyone agreed to try harder
 - After the meeting, which was held on Tuesday, everyone has come within 20 minutes of our scheduled time which we think is quite good.
