

## **Group 7 - Qos - FFI - 01.03.12**

Håvard Tørresen, Jan Alexander Bremnes, Jørgen Nordmoen, Magnus Kirø, Ola Martin Støvneng, Stig Tore Johannesen.

## **Introduction**

We've dedicated this week mostly to finishing off the designs of both the client and server. Essentially we are right on schedule, and things have been proceeding perfectly this week.

## **Progress summary**

During this week, we've worked on class diagrams for the client, test suits, and general report- and documentation-related tasks. Work on integrating Apache Axiom with OpenSAML revealed incompatibilities with internal XML-objects, and so we decided to discard Axiom, and instead use the XML-features of OpenSAML.

## **Completed tasks**

See: Activity plan week 9.

## **New tasks**

None found

## **Planned work for next period**

See: Activity plan week 10

We're also planing on starting the actual coding of one or two modules on the client side, but until we have updated some documentation we're unable to predict which part of the client library would be the most natural to start with.

## **Other changes** (risks analysis, etc)

This week has been fairly quiet and nothing truly unexpected has popped up.
