

Group 7 - Qos - FFI - 09.02.12

Håvard Tørresen, Jan Alexander Bremnes, Jørgen Nordmoen, Magnus Kirø, Ola Martin Støvneng, Stig Tore Johannesen.

Introduction

We had a meeting with FFI at Gløshaugen on Wednesday. The preliminary report was delivered. And we have done more research on the technologies and preexisting software that we are planning to use.

Progress summary

No unforeseen problems.

We have had expected progress as the preliminary report have been delivered, we had a meeting with FFI where we got feedback on the report and some more suggestions and answers about technologies. The progress of researching technologies have gone according to plan, we have decided not to use some of the existing libraries we thought about earlier.

We have started to make use cases for the client and server side. Making good progress on both, and they will probably be finished by early next week. Further work on documentation and the report have been done successfully. According to the WBS and Gantt diagrams we should be close to our target. While the risk list will continue to be a living document throughout the project, we feel that it is as complete and relevant as it is viable to make it at this point.

Completed tasks

- Preliminary Report.
- Requirements.

New tasks

- Use cases has shown up as a subtask of Documentation.

Planned work for next period

- Use cases
- Report and documentation
- System architecture
- Research

Other changes (risks analysis, etc)

The risk list have been updated as part of the report and documentation work done this week.

We hope to get some feedback on that when we meet our supervisor.
