

Group 7 - Qos - FFI - 01.01.01

Håvard Tørresen, Jan Alexander Bremnes, Jørgen Nordmoen, Magnus Kirø, Ola Martin Støvneng, Stig Tore Johannesen.

Introduction

The group has worked steady towards the goal of documenting and planning the project in this initial phase. There has been no major group difficulties and we have worked well together. The organization hierarchy has also proved to be well suited for our group and we are certain that we will continue to thrive in this environment.

Progress summary

This week has seen progress in modeling the sequence diagrams for both the client library and the server, and completion of the use cases. Research on useful pre-made libraries has continued without major obstacles, and is nearing completion. The report has also had some major advancement with further refining of already included sections, and the addition of new documentation.

Completed tasks

Finished:

- Sequence diagrams for client library
- Extending textual use cases for client library
- Updating server WBS
- Documenting server mediators
- Updating server use cases

Remaining:

- Research on Open SAML and Axiom
- Server sequence diagrams

New tasks

- Refined the glossary

Planned work for next period

See attached activity plan.

Other changes (risks analysis, etc)

- After we started making detailed activity plans, we quickly realised the difficulty of estimating the time needed for a task. This has made us more prone to overestimate the

time needed and that is reflected in the activity plan, where we spent much more time on unplanned activities due to finishing planned activities ahead of time.

- We have also come to realise that creating documentation for the project is a much more time consuming task than what we had planned for. This has lead to the situation where we have had one person almost entirely on documentation duty.
